

Funding rules

eligibility, overheads, reporting,
allowable costs, short funding cycles

University/ institute policies

hiring rules, promotion criteria, re-mote
work, contract limits

Publication system

Peer review, journal prestige, open
access requirements, impact factors

Public perception of science

Trust, skepticism, politicization,
expectations of usefulness

Policy relevance expectations

Pressure to produce actionable or stakeholder-relevant knowledge

Willingness to fund science

Decision making concerning science
and science topics funding

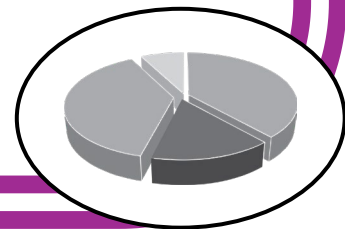

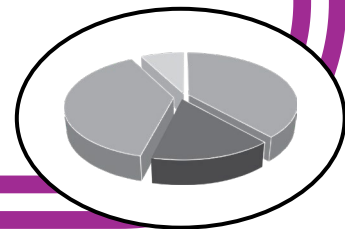

Research funding

Grants are limited and strongly
competitive

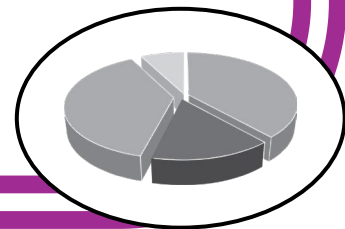

Permanent positions

Low amount of available permanent
positions

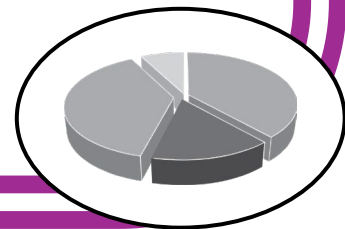

Time Management

Competing demands between research, teaching, administration, care, and rest

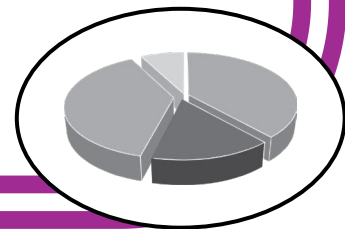

Authorship and credit

Competition over intellectual
contribution and recognition

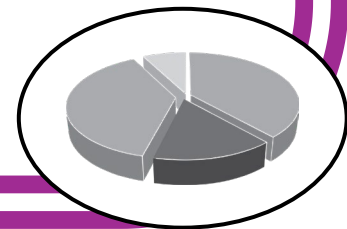

Data access

Exclusive datasets, field sites, samples,
long-term observations

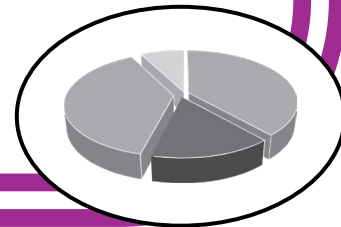

HPC access

HPC time, storage, software, technical
support

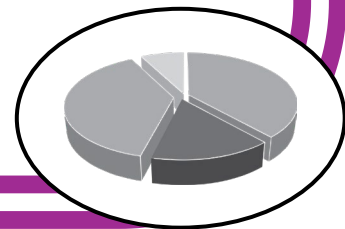

Lab access

Physical resources needed for research

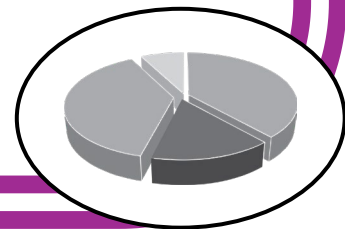

Access to Fieldwork

Physical resources needed for research

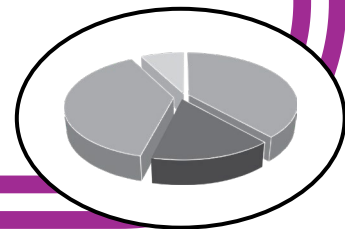

Access to Literature

resources needed for research

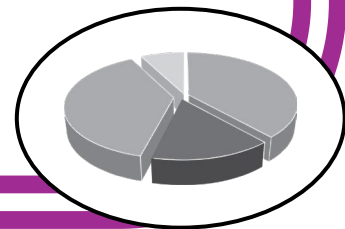

Institutional support

admin help, seed funding, travel money,
teaching relief

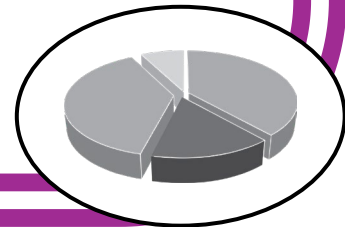

Publication Pressure

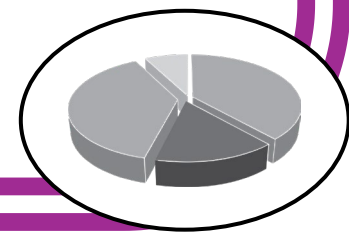

Number of papers for a PhD, H-index

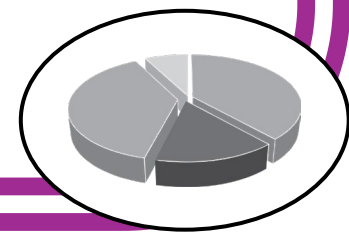

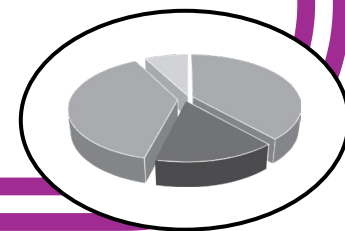

Collaboration/ Networks

Access to collaboration partners,
networks in the field

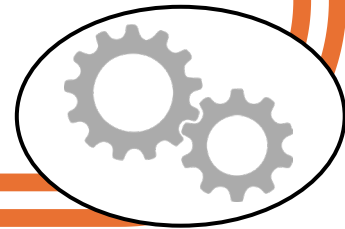

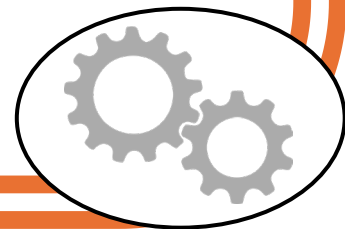

Writing proposals

Availability of funding to pursue research
interests, writing proposals

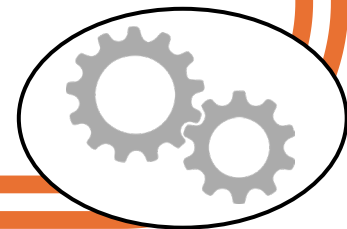

Collecting data

Fieldwork, experiments, surveys,
observations, archival work

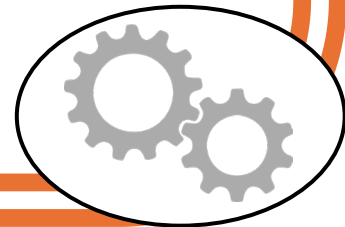

Analyzing data

Statistics, coding, modeling,
interpretation

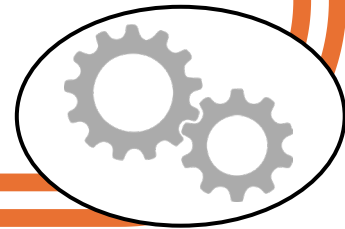

Peer review

Reviewing papers, proposals, reports

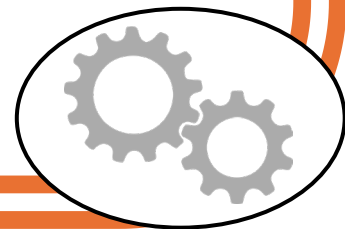

Teaching

Lectures, seminars, supervision,
curriculum work

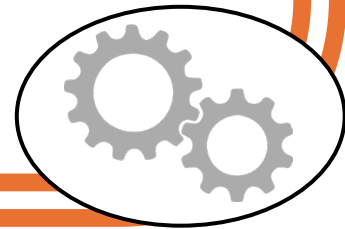

Supervising students

Training, mentoring, feedback, career
development

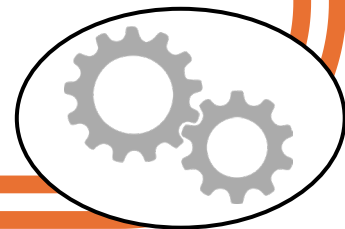

Reading literature

Core practice for building knowledge
and positioning research

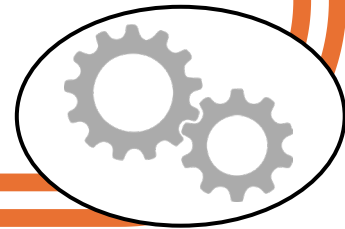

Networking

Building professional relationships and
future opportunities

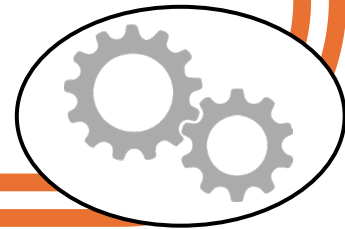

Communicating science

Outreach, policy briefs, stakeholder meetings, media work

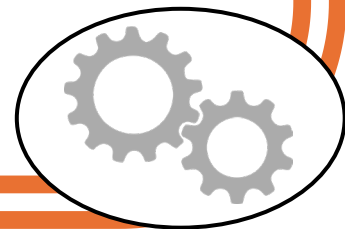

Managing projects

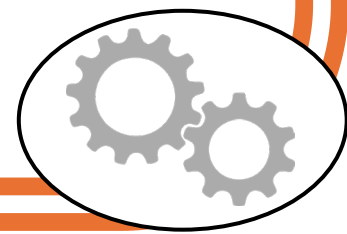

Timelines, deliverables, budgets,
reporting, meetings

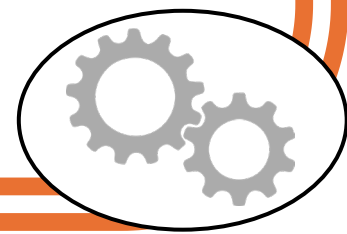

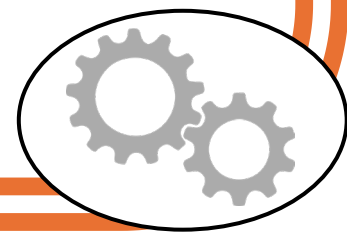

Presenting at conferences

Communication, visibility, networking,
feedback

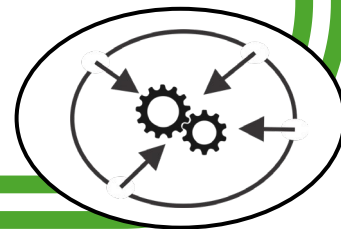

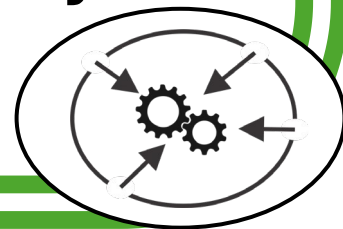

Language requirements

English as dominant scientific language shapes participation, visibility, and publication opportunities

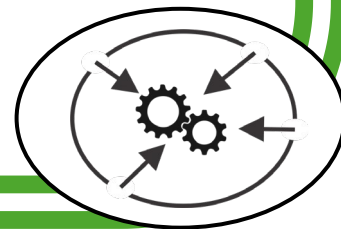

Mobility expectations

International moves, fieldwork, conferences, and temporary contracts are often expected but not equally possible for everyone

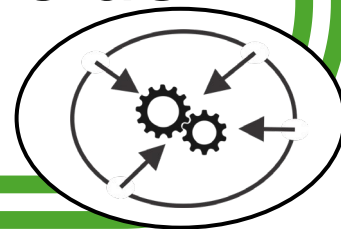

Cost of living

Shapes career choices, especially for
early-career researchers

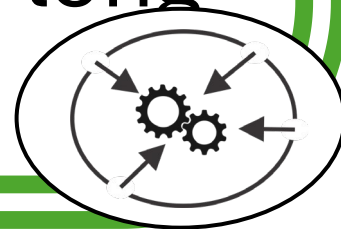

Family situation / care responsibilities

Mobility restrictions, child care
availability, living in the same place as
your partner

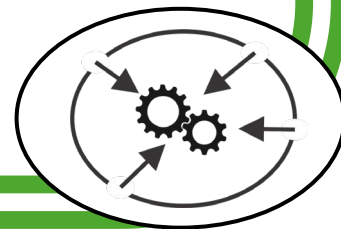

Visa and residence conditions

access to jobs, travel, funding, and long-
term planning

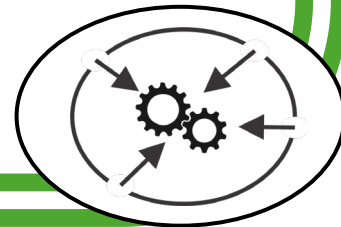

Work-life balance

Cultural / field related expectations of
work time

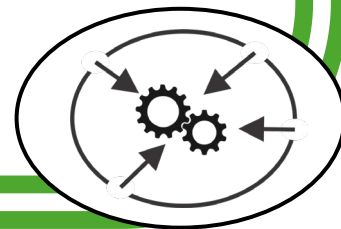

Freedom of science

Restrictions on research topics,
terminology, conspiracy theories

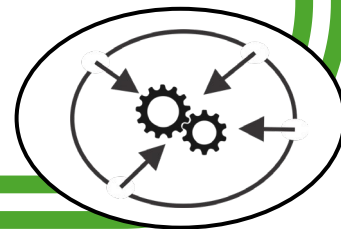

Digital infrastructure

Internet access, computing access,
remote work possibilities

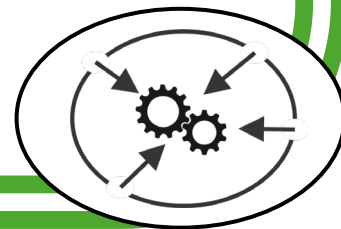

Access to education

access to schools, universities,
institutions, reputation of institutions

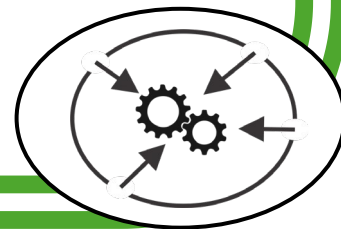

Organisational policies

Hiring policies, contract restrictions

Cultural/ language barriers

institutional norms, exclusionary expectations, social codes embedded in the scientific system itself

Availability of Funding

Research topics funded, funding structure
